LEGISLATIVE MONITORING REPORT

November 14, 2017

This document is intended to advise Trust Council about past or proposed external regulatory changes that could directly affect Islands Trust operations, local trust committee/island municipality bylaws or regulations, or Strategic Plan projects. The chart captures changes in the last six months and is organized according to the following categories:

- Planned legislation
- Legislation in process
- New legislation in effect
- Court decisions
- New resources
- Discussion/Planning/Trust Fund Board (TFB) related advocacy topics
- Environmental assessment processes in the Trust Area
- Legislative change requests

<i>Contaminated Sites Regulation</i> Amendments	Consultation closed. Significant changes to the Contaminated Sites Regulation under the Environmental Management Act have been made and are effective November 1, 2017.	The Province has amended the Contaminated Sites Regulations to incorporate new soil, water, and vapour standards to reflect current science. These include up-to-date toxicology data, the new BC environmental groundwater model, and new environmental quality standards. The Province asked for feedback earlier in 2016 and 40 local governments, including the Islands Trust, responded. Previously proposed amendment that would have negatively impacted local governments were dropped.	When the regulation was first brought in in the late 1990s, the Islands Trust and many other local governments, based on legal advice, opted out.	All local trust committees opted out of the receipt of contaminated sites profiles. Those local government that opted-out may remain opt-ed out under the new legislation.

<p>2016 Salish Sea Toxics Monitoring Review: A Selection of Research</p>	<p>Released in May 2017</p>	<p>2017 report from the Puget Sound Ecosystem Monitoring Program presents an overview of selected recent monitoring and research activities focused on toxic contaminants in the Salish Sea. The report describes that toxic chemicals reach the Salish Sea through a variety of pathways, including stormwater runoff, atmospheric deposition, industrial and municipal discharges, and agricultural runoff. The report found that:</p> <ul style="list-style-type: none"> • Aquatic biota are exposed to contaminants at levels that can adversely affect their health and the health of people that consume them. • The levels of some contaminants have declined in sediments and aquatic biota as a result of successful management actions. • Contaminants of emerging concern such as estrogenic chemicals and microplastics are widespread and frequently detected • Contaminant source control and cleanup have been an effective approach to reduce sediment contaminant loads in many areas. • Stormwater impacts and responses are being addressed through coordinated regional efforts.
