Percentage of private dwellings occupied by usual resident between 1991 and 2021

Notes:

- 1981 Census, about five-sixths of EA 59005252 included here and about one-sixth of EA 59005252 included here.
- To ensure confidentiality, the values, including totals, are randomly rounded either up or down to a multiple of '5' or '10.' To understand these data, you must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%.
- 1. For Gambier Island Trust Area as a Designated Place (DPL), the 2021 Census reported 499 fewer private dwellings when compared with the 2016 Census data. Despite being outside the window for formal review, the discrepancy in data potentially results from a difference in the classification or recording of dwellings between the 2016 and 2021 census collections. Further, we will do our best to take these considerations into account in the planning for the 2026 Census.
